WEB SLING & TIE DOWN ASSOCIATION

ADVANTAGE

SALES & SUPPLY CO., LLC

OUR MISSION

We are a company with a vibrant culture, delivering industry leading lifting solutions, quality and safety.

OUR VISION

To be the most trusted, respected and preferred partner in the lifting industry.

OUR VALUES

Advantage Sales & Supply is a company that is built on integrity and ethical actions, focused on respectful, enthusiastic engagement, while building a best-in-class operation, committed to safety, quality and a positive employee experience.

Explore the **Advantage Sales & Supply** catalogs to discover a comprehensive range of lifting, rigging, towing, and industrial equipment. Our catalogs provide detailed product information, specifications, dimensions, and more. Scan the QR codes below to view digital copies.

E-Z GUIDE TO ORDERING FABRICATED SLINGS

Terms and Conditions

Terms of Payment:

Standard terms are Net 30 days from date of invoice for approved credit accounts. C.O.D. or C.I.A. terms may be arranged without credit approval. All sales are final.

Freight Policy:

A freight allowed policy will be arranged with each customer based on weight or order value. For orders that meet the full freight allowed terms, shipping will be arranged at the discretion of Advantage Sales & Supply. This will be based on established freight rates and shipping time. For shipments that are freight paid by the customer, a preferred carrier may be specified by the customer.

Credit and Claims:

All claims for shortages, errors, defective merchandise, billing errors or price discrepancies must be received within 5 days after receipt of goods. Once the adjustment has been agreed upon, a credit memo will be issued from the Billing Department. All material ordered becomes the property of the purchaser upon delivery to the carrier. Claims for short shipments or damaged goods should be made to the carrier immediately.

Return of Merchandise:

No goods may be returned without written Return Merchandise Authorization. If the return is the result of a customer error, Advantage Sales & Supply will do its best to minimize any expense on the customer's account. Our standard restocking fee is 15% plus freight costs. Returns for credit are at the sole discretion of Advantage Sales & Supply.

Prices:

Invoices will be based on the list prices or quoted prices prevailing at the time of shipment. Due to occasional cost fluctuations, please check with a sales representative concerning price levels. Prices subject to change without notice.

Warranty:

Advantage Sales & Supply warrants all products to be free from manufacturing defects. If a product is found to be defective after inspection by an authorized representative of Advantage Sales & Supply, the original purchase price will be refunded. Advantage Sales & Supply makes no other warranty of any other kind, expressed or implied. Seller expressly disclaims all other warranties, expressed or implied, including any warranty of merchantability and any warranty of fitness for a particular purpose.

Lifting and Rigging Basics and Terminology

We can't say this enough: **lifting and rigging products are safety products.**
 They need to be used properly and inspected regularly to be used safely.
NEVER EXCEED RATED CAPACITY.

Basic Terminology - Below you will find Key Terms in the Lifting and Rigging industries.

Working Load Limit:

Also known as the Safe Working Load, WLL, SWL or Working Load, it is the maximum load which should ever be applied to the product under any condition. The WLL is based on a load being uniformly applied in a straight-line pull.

Proof Load:

The load a product can withstand during the manufacturer's quality control testing for the purpose of detecting defects and deformation in the material. The Proof Load is applied at twice the value of the Working Load Limit.

Minimum Breaking Strength (MBS):

Do **NOT** use MBS for design or rating purposes. Always use the Working Load Limit instead. Minimum Breaking Strength is an average figure at which samples have been found to break under laboratory conditions, in straight-line pulls with constantly increasing loads. These conditions are rarely duplicated in actual use. *The MBS applies ONLY to new, unused product.*

Lift Angle:

A term applied to Slings, the lift angle affects the WLL. When a Lift Angle is higher, the rating of the sling also increases. When the Lift Angle decreases, the Working Load Limit also decreases.

Sling Tag:

End users have the right to know the capacity of the sling they are using. A sling tag will show the critical information that the end user will need to select the proper rigging for the job. This information on a chain sling will show Manufacturer Name, Manufacture Date, Certification Number (which normally can correspond to a paper/digital Certificate of Conformance), Material Diameter, Number of Legs, Working Load Limits (at different lift angles if multi legged), Reach Measurement and Sling Configuration.

Reach:

A term applied to Slings, it is the measurement from bearing point to bearing point. This measurement must be accurate. During a sling inspection, reach discrepancies can indicate overloading, stretch or equipment modification.

Design Factor:

An industry term denoting a particular products' theoretical reserve capacity. It is a Ratio which divides the MBS/WLL.

CHAIN

- Grade 30 Proof Coil: 4:1
- Grade 43 High Test: 3:1
- Grade 70 Transport: 4:1
- Grade 80 Alloy: 4:1
- Grade 100 Alloy: 4:1

CARGO CONTROL

- Load Binders: 3:1
- Cargo Straps: 3:1

WIRE ROPE/CABLE

- Bulk Wire Rope/Cable: to calculate a wire rope or cable WLL: divide the MBS by five
- Wire rope slings: 5:1

SYNTHETIC

- Nylon Web Slings: 5:1
- Polyester Web Slings: 5:1
- Endless Round Slings: 5:1
- High Performance Round Slings: 5:1
- Spliced Synthetic Cordage/ Rope Slings: 5:1

RIGGING HARDWARE

- Generally, rigging hardware matches the sling with which it pairs. For instance, Grade 100 Clevis Sling Hooks pair with Grade 100 Chain, and Eye Hoist Hooks pair with wire rope slings at 5:1.

NOTE: if you are mixing your Hardware styles with your Sling styles (in other words, using a chain hook with a wire rope or synthetic sling) always use the lowest published rating when tagging and certifying a sling.

Fatigue/Cycle Test:

A test administered to gauge the durability of products. In the chain and hardware industry, this applies only to Grade 80 and Grade 100 products. This test is administered at 1.5 times the working load and has a minimum cycle count of 20,000 to be considered a passing test.

Shock Load:

Loads which exceed the static load caused by rapidly changing movements such as jerking, impacting, or swinging of load. Working load limits do not apply in these conditions. **NEVER SHOCK LOAD WHILE LIFTING!**

Overhead Lifting:

It is considered an Overhead Lift when the load lifts off (breaks the plane of) the ground or lifts off the object upon which it is resting. OSHA makes no distinction between an injury to a toe or an injury to a head. OSHA's goal is to eliminate all injuries. Therefore, the term "Overhead Lifting" is a misnomer. It does not have to be lifted above one's head for the term "Overhead Lifting" to apply. When planning and performing a lift, a competent person must select the proper Advantage Sales lifting product. The selected products **MUST BE RATED AND COMPLIANT WITH OSHA FOR OVERHEARD LIFTING.**

NOTE: Many products look the same and seem like they will work for a particular job. If there is ever any doubt as to a product's OSHA compliance, please consult with your sales representative.

Products that are OSHA Compliant for Overhead Lifting:

Chain & Hardware:

The only grades of chain and chain hardware that **ARE** rated for OHL are Grade 80, Grade 100 & Grade 120. All other grades of chain **ARE NOT** compliant with OSHA specifications for OHL. **Never exceed working load limits.**

Grade 80, Grade 100, or Grade 120 Chain Slings:

Chain slings made from these components **ARE** rated for OHL. An OSHA Compliant Sling Tag which is clearly legible must be affixed to the sling. **Never exceed working load limits.**

Wire Rope & Aircraft Cable:

Wire Rope and Aircraft Cable **ARE** approved for overhead lifting. **NEVER USE** the Minimum Breaking Strength (MBS) for engineering or rating purposes. If applied in a straight-line pull, use 20% of the MBS as the working load limit for plain wire rope and aircraft cable. If an end fitting is attached (ferrules, sockets, etc.) the working load limit will be lower than 20% of the MBS. Please contact your sales representative for accurate ratings for custom made products. A proof load test may be required prior to delivery. **Never exceed working load limits.**

Wire Rope Slings:

Wire Rope Slings **ARE** rated for OHL. **Never exceed working load limits.** Refer to your **Advantage Sales E-Z Guide to Ordering Fabricated Rigging Products.**

Polyester & Nylon Web Slings, Endless Round Slings:

Web Slings and Endless Round Slings **ARE** rated for OHL. **Never exceed working load limits.** Refer to your **Advantage Sales E-Z Guide to Ordering Fabricated Rigging Products** and pages 111-114.

Rigging Hardware Rated for OHL:

1. Shackles which show a load rating and manufacturer
2. Eye Hoist Hooks
3. Self Locking Hooks
4. Forged Eye and Jaw End Turnbuckles
5. Master Links & Pear Links
6. Snatch Blocks
7. Forged Turnbuckles - Eye and Jaw end (with Bolt and Nut)

This list does not cover all OSHA compliant hardware. There are thousands of products that have been engineered and designed for overhead lifting. If you would like help discerning whether a product is OSHA compliant for OHL, please consult with your sales representative.

LIFT IT SAFELY - Never Shock Load, Never Side Load, Never Swing Load

General Warnings & Cautions

Matching Components:

All attachments used with chain and wire rope must be of suitable material, type and strength to provide adequate safety protection. Attachments should have Working Load Limits at least equal to the other components with which they are used.

Inspection Warning:

No product can operate indefinitely at its rated capacity. Cable, wire rope, chain, and their attachments must be inspected regularly by a trained or qualified individual for visible damage, distortion, elongation, corrosion, cracks, nicks, or abrasion, which may cause failure or reduce the strength or ability of the product to perform safely.

Marking Requirements:

The US Customs law requires that the end user of imported products be informed of the country of origin. All imported products sold by Advantage Sales & Supply are marked accordingly. Re-sellers are responsible to relay this country of origin information to the end user.

Warnings:

- No product can operate indefinitely at its rated capacity.
- Avoid shock loads and side loads.
- Keep out from under a raised load.
- Never exceed the Working Load Limit.
- Inspect your rigging products regularly.

Wire Rope Sling Warnings and Cautions

To ensure safety, follow these guidelines:

Inspect Before Use:

Always check wire rope for signs of wear, strand damage, or other signs of abuse.

Do Not Use:

Never use damaged, overworn, or otherwise abused wire rope.

Avoid Overloading:

Never exceed the wire rope's rated capacity.

Stay Informed:

Thoroughly read and comprehend the manufacturer's guidelines before use.

Follow Regulations:

Adhere to applicable codes, standards, and regulations for inspection and removal requirements.

Prioritize Safety:

Inspect, maintain, and use wire rope properly! Remove wire rope from service if signs of abuse are present.

	<p>WARNING</p> <p>Wire Rope Failure May Cause Serious Injury or Death!</p> <p>Wire rope that is overloaded, overworn, damaged, or poorly maintained WILL FAIL.</p>

Sling capacities for rope diameters 1/8" through 5/16" are based on 7X19 GAC.

*Rated capacities basket hitch based on D/d ratio of 25 times the component rope diameter. Rated capacities based on pin diameter no larger than the natural eye width or no less than the nominal sling diameter. Rated capacities based on design factor of 5.

** See Choker Hitch Rated Capacity Adjustment

Do not use with sling angles less than 30° degrees.

*Torque values shown are based on clean, unlubricated threads. Wire rope clips are not designed for load carrying purposes, therefore working load limits have not been established.

Malleable Wire Rope Clips made according to Federal Specification FF-C-450 D, Type 1, Class 2.

Forged Wire Rope Clips made according to Federal Specification FF-C-450 D, Type 1, Class 1. All parts on X100 Drop Forged Wire Rope Clips are Hot Dip Galvanized. The U-Bolt is Hot Dip Galvanized, then Powder Coated.

METHODS OF APPLICATION:

When using wire rope clips, (also known as wire rope clamps) always apply the saddle of clip to the "live side" or load bearing side of the cable assembly.

Never Saddle a Dead Horse

1. Turn back the specified amount of rope from the thimble. Apply the first clip one base width from the dead end of the wire rope.

2. Apply the next clip as near to the loop as possible. Turn on the nuts but do not tighten.

3. Space additional clips equally between the first two. Take up rope slack. Tighten all nuts evenly on all clips.

SEE THE **X100**® DIFFERENCE IN OUR EXTRA HEAVY DUTY THIMBLES

X100 Extra Heavy Duty thimbles stand out as superior wire rope fittings due to their ability to handle higher loads and offer enhanced protection against wear and deformation. Unlike standard thimbles, they provide extra strength to prevent damage to the rope or wire they secure.

KEY ADVANTAGES:

- Increased material thickness & depth – provides superior protection for wire rope
- Ideal for high-stress applications – designed to withstand extreme loads
- Exceptional durability – offers long-lasting performance in demanding conditions

CABLE & WIRE ROPE CUTTERS

MODEL	CABLE SIZE	CASE PACK	TYPE	LENGTH	WEIGHT/PIECE (LBS.)
CUTTER187	1/64" - 3/16"	1	One Hand	8"	0.62
CUTTER500	1/4" - 1/2"	1	Two Hand	18"	8
CUTTER625	3/8" - 5/8"	1	Two Hand	24"	12

Cable cutters are sharp tools. Use cable cutters with extreme caution. Only use the cable cutters to cut steel cable and wire rope.

CUTTER187

CUTTER500, CUTTER625

HAND SWAGING TOOLS

MODEL	CABLE SIZE	NUMBER OF CAVITIES	TYPE	LENGTH	WEIGHT/PIECE (LBS.)
HSC350	1/16", 3/32", 1/8"	3	Two Hand	14"	5.5
HSC600	1/16" through 3/16"	5	Two Hand	26"	6.5
HSC600B	1/16" through 3/16"	5	Bench Mounted	22.5"	6.6
SWAGE250-312	1/4", 5/32", 5/16"	3	Two Hand	30"	10
SWAGE375	3/8"	1	Two Hand	36"	13.5

Always follow swaging instructions provided with the tools. Use a gauge to check that the sleeves have been fully swaged. Properly swaged aluminum and copper sleeves will develop the rated breaking strength of the cable.

According to Federal Specification FF-T-791b.

- **Eye-Eye** Turnbuckles (Drop Forged HDG) **ARE** rated for Overhead Lifting.
 - **Jaw-Jaw** and **Eye-Jaw** Turnbuckles (Drop Forged HDG) are **ONLY** rated for Overhead Lifting if the Jaws **HAVE** a Bolt with Nut.
 - **Jaw-Jaw** and **Eye-Jaw** Turnbuckles (Drop Forged HDG) with a Pin with Cotter Pin in the Jaw are **NOT** rated for Overhead Lifting.
- Please call your sales representative for information on which sizes include a Bolt with Nut, or Pin with Cotter Pin.

- Turnbuckles are to be used in a straight line pull only
- Turnbuckle end fittings should be fully engaged with the body threads during use
- Hot-Dip Galvanized steel

- Turnbuckles should be rigged or secured to prevent unscrewing during use
- UNC threads on body and end fittings

If you do not see the size/configuration you desire, please call your sales representative.

▲ WARNING Turnbuckles are used for straight or in-line pulls only.

DO NOT EXCEED WORKING LOAD LIMIT.
REFER TO PAGES 7-9 FOR WARNINGS AND CAUTIONS.

A buoyant high performance rope boasting the equivalent strength of a steel rope.

- **Maximum Performance:** 12-strand construction with the strength and elongation characteristics of a steel rope at just one seventh the weight
- **Reliability:** Urethane coating for superior abrasion resistance, long service life and high flexibility. UV resistant.
- **Specific Gravity:** 0.975 floating
- **Melting Point:** 145°C

X100[®] GRADE 100 CHAIN & CHAIN SLINGS

X100 GRADE 100 CHAIN

- Every link has been Proof Tested to Two Times (2X) the Working Load Limit in accordance with the National Association of Chain Manufacturers Specifications
- X100 Grade 100 Chain is suitable for overhead lifting
- Grade 100 Chain Sling Assemblies are compliant with ASME B30.9
- Permanently embossed with X100 and a traceable lot code
- BLUE CAT Blue Cataphoresis finish
- X100 Grade 100 chain is suitable to be used in fabricated Lifting Chain Sling Assemblies

REPLACEMENT LATCH KIT

X100 X-LATCH KIT FOR CRANE BLOCKS

- Forged Heavy Duty Design
- Two Position Capability as a Locked Latch or Spring Latch
- High Quality Black Powder Coated Finish
- High Quality Zinc Plating on Pins and Hardware
- Stainless Steel Heavy Duty Spring Fatigue Tested to 10,000 Cycles
- Pins and Latches Ductility Tested for Safety
- Compatible as a Replacement Latch For Many Popular Crane Blocks
- Sold in Box Quantities or by the Piece
- Every Latch Sold with Extra Spring and C-Style Retaining Clips/Nuts
- X-Latch Repair Kits available. See information online
- Markings: **X100** Branding & Size

X100® ALL ALLOY LONG REACH SHACKLES

- Suitable for Overhead Lifting
- Meets ASME B30.26 Requirements
- 100% Forged Alloy Steel
- Design Factor of 5:1
- Markings: X100 Brand, Size, Working Load Limit, Traceability
- Extended Bow: Designed for lifting applications that require an extended reach to connect to pick points
- Easily recognizable X100 BLAZE ORANGE powder coating which provides protection from corrosion, and enables full exposure of identification markings
- Hot dip galvanized prior to X100 BLAZE ORANGE powder coating provides superior corrosion resistance
- Load must be evenly distributed over entire pin
- To achieve full working load limit, 80% minimum pin coverage is required
- NEVER side load or point load pins or bodies

GET THE EDGE

ADVANT-EDGE®

EDGE PROTECTED WEB PRODUCTS

by  **ADVANTAGE**

A. EDGE PROTECTION

Over time, the edges of webbing become a vulnerable part of the sling that take wear and tear. With the reinforced edge protection system of ADVANT-EDGE®, the material offers a level of protection against wear that is greater than standard polyester slings, providing end-users with a superior product.

ADVANT-EDGE® is engineered for superior durability. The edge protection features a more durable **primary edge polymer (A)**, and additional **edge protective threads inside the body (B)**.

NYLON & POLYESTER SLINGS - FLAT EYE & TWISTED EYE

Lengths from 18" to 30' plus.

Twisted Eye Slings retain the same rated capacity as Flat Eye Slings.

All slings and bridles can be fitted with wear pads and sleeves.

Wear Sleeves: Wear Sleeves have the ability to slide and move the protection at various points, or can be sewn on to the body of the sling. SLIDING SLEEVES are removable from the sling. READY SLEEVES are sewn with 'Velcro' to accommodate fast and easy installation & removal. They are perfect for slings with hardware.

Sleeves are available in protective pad webbing, leather, or felt in all widths.

FLAT EYE & EYE - TYPE 3

Web slings made with a flat loop eye on each end with loop eye opening on same place as sling body. This type of sling is sometimes called a flat eye and eye, eye and eye, or double eye.

TWISTED EYE & EYE - TYPE 4

Web slings made with both loop eyes turned to form a loop eye which is a right angle to the plane of the sling body. This type of sling is commonly referred to as a twisted eye sling.

TYPE 3 & TYPE 4, CLASS 7 WEBBING

TAPERED EYE & EYE

A tapered eye offers the same working load limit with a slimmer profile in the eye. This slimmer profile allows the eye to fit most hooks. Slings with widths of 3" or greater come standard with a tapered eye.

NYLON & POLYESTER SLINGS - ENDLESS

Protective webbing sleeves can be placed on any part of type 3 & 4 slings as well as type 5 (endless) slings.

We sew synthetic slings to your specifications. Please call with any custom requirements.

Endless web slings are the most practical type for many hoisting applications. They can be used for both a choker or basket sling.

	6"	23,400	18,720	46,800	RE2-906

The thickness of 2 ply reverse eye slings are 1/2"

Reversed eye web slings are the best general purpose nylon sling available. Eyes can be turned to either side to increase sling life.

REVERSED EYE SLING TYPE 6

ORDERING SLINGS BY STOCK NUMBER

Specify Sling Length (in feet) After Stock Number

1) Select the sling type best suited:

- Triangle-Choker TC
- Triangle-Triangle TT
- Flat Eye-Eye EE
- Endless EN
- Bridle

2) Determine number of plies and widths required at top rated capacity needed.

3) Add lengths to our part number.

All slings are sewn in-house and are customizable.

⚠ WARNING Do not exceed rated capacities. Sling tension increases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°.

ORDERING BRIDLE SLINGS

⚠ WARNING See more Sling Warnings & Cautions and Criteria for Removal from Service on page 114.

DO NOT EXCEED WORKING LOAD LIMIT.
REFER TO PAGES 7-9 FOR WARNINGS AND CAUTIONS.

Easiest, smoothest, and safest Cable Puller available. Premium quality for the toughest jobs.

CLOSE UP DOUBLE GEAR

KEY FEATURES

- Heavy Duty Aluminum Double Gear
- Double Line Galvanized Aircraft Cable with Pulley/Hook Block
- 360° Rotation Swivel Hook
- Heavy Steel Frame & Handle
- Easy-to-Use Thumb Operated Engaging and Disengaging
- Forged Hooks with Safety Latches
- Anti-Slip Grip Handle
- Forged Spring-Operated Pawl
- Safety Factor 2 to 1

CAUTIONS

DO NOT OVERLOAD Maximum weight capacity. For PULLING ONLY. This item is not rated for overhead lifting. Be sure that the area is free and clear of any objects.

VISUALLY INSPECT PULLER Check for any damage or wear before each use. Look for fraying, kinks, or twisted wire in the cable. Look for damage to the handle, body, or mechanism. **Do not use if any damage is evident.**

DO NOT PULL AROUND CORNERS.

DO NOT USE A "CHEATER" PIPE OR ANY OTHER DEVICE TO INCREASE LEVERAGE. Do not use with any evidence of a bent or twisted handle.

NEVER WRAP CABLE AROUND AN OBJECT AND RECONNECT TO THE PULLER'S BODY OF CABLE.

WIRE ROPE FABRICATION

WIRE ROPE AND WINCHLINES

Our fully stocked and equipped wire rope fabrication shop can tackle even the most critical rigging applications. Whether it's for the oil & gas industry, excavation, crane operators, tow trucks and roll backs, MRO or a simple winchline for an ATV, we can handle the job. All of our products are certified and tested to meet applicable standards. Please review our E-Z GUIDE to assist you during the ordering process.

CHAIN FABRICATION

CHAIN FABRICATION AND ASSEMBLY

If you are in need of a certified lifting chain, Grade 70 tie-down binder chain, cut lengths of Grade 30 Proof Coil or trailer safety chains, our chain shop can accommodate you. Our top quality components and careful fabrication get you the right chain products to get the job done. All of our chain products meet the applicable specifications, whether it be OSHA B30.9, ASTM J-684, API, Federal Military Specifications or DOT regulations. Again, please refer to our E-Z Guide to assist you during the ordering process. Our efficient chain shop is ready to get you the right products at the right price, in the fastest time frame.

SYNTHETIC FABRICATION

SYNTHETIC FABRICATION

If it's web slings or tie-downs you are looking for, we have you covered. Light weight and durable, our nylon and polyester slings are useful in many applications. Our web slings are certified to OSHA B30.9 and are tested regularly to guarantee performance. A great option for when you need a light weight, high strength, non-abrasive, safe, low cost alternative to get a rigging job completed. Again, please refer to our E-Z Guide to assist you during the ordering process. Our custom synthetic fabrication team stocks and can sew all sizes up to 12" 4 ply web slings. Additionally, we can outfit you with custom lifting products to meet your particular application, whether its for lifting barrels, a 4 leg bridle or an Endless Round Sling. If you need it, we can sew it!!!

HMPE ROPE FABRICATION

HMPE HIGH STRENGTH ROPE FABRICATION

These winchlines and slings offer a high strength, light weight alternative to wire rope. These ropes are hand spliced in-house by our skilled technicians. HMPE is great for river and oilfield applications and is one of the safest products on the market. They are not recommended for applications where there is abrasion or heat. These products are safe and rated for overhead lifting.

TRAILER SAFETY FABRICATION

TRAILER SAFETY CHAIN ASSEMBLY

We are one of the largest trailer safety chain suppliers in the country. The reason for this is we realize that the "one size fits all" approach our competitors use just isn't flexible enough for the trailer manufacturing industry. Made in accordance with ASTM J-684, our safety chains range from a 2,000# GVWR up to 45,200# GVWR, we can outfit your trailer with the proper length to keep your customers safe out there on the road. In addition to use in the USA, our chains are approved for use in Canada by CSA International.

CRITERIA FOR REMOVAL FROM ASME B30.9

9-2.9.5 Removal Criteria

A wire rope sling shall be removed from service if any of the following conditions are present:

- A. Missing or illegible sling identification (see Section 9-2.7)
- B. Broken wires
- C. For strand-laid and single-part slings, 10 randomly distributed broken wires in one rope lay, or 5 broken wires in one strand in one rope lay (see Fig. 9-2.0-2)
- D. For cable-laid slings, 20 broken wires per lay (see Fig. 9-2.9.5-1)
- E. For less than eight-part braided slings, 20 broken wires per braid length (see Fig. 9-2.3.2-2)
- F. For eight-part or more than eight-part braided slings, 40 broken wires per braid length (see Fig. 9-2.3.2-2)
- G. Severe localized abrasion or scraping resulting in a reduction from nominal diameter of more than 5%
- H. Kinking, crushing, birdcaging, or any other damage resulting in damage to the rope structure
- I. For hooks, removable criteria as stated in ASME B30.10
- J. Fittings that are cracked, deformed, or worn to the extent that the strength of the sling is substantially affected
- K. Severe corrosion of the rope or fittings
- L. Other conditions, including visible damage, that cause doubt as to the continued use of the sling
- M. For rigging hardware, removal criteria as stated in ASME B30.26
- N. Other conditions, including visible damage, that cause doubt as to the continued use of the sling

Typical Evidence of Wear and Abuse

All wire ropes should be thoroughly inspected at regular intervals. The longer it has been in service or the more severe the service, the more thoroughly and frequently it should be inspected. Be sure to maintain records of each inspection.

Inspections should be carried out by a person who has learned through special training or practical experience what to look for and who knows how to judge the importance of any abnormal conditions they may discover. It is the inspector's responsibility to obtain and follow the proper inspection criteria for each application inspected.

Here you see a single strand removed from a wire rope subjected to **STRAND NICKING**. This condition is a result of adjacent strands rubbing against one another. While this is normal in a rope's operation, the nicking can be accentuated by high loads, small sheaves or loss of core support. The ultimate result will be individual wire breaks in the valleys of the strands.

A typical failure of a rotary drill line with a **POOR CUTOFF PRACTICE**. These wires have been subjected to continued peening, causing fatigue type failures. A predetermined, regularly scheduled cutoff practice can help eliminate this type of problem.

A **BIRDCAGE** is caused by sudden release of tension and the resulting rebound of rope. These strands and wires will not be returned to their original positions. The rope should be replaced immediately.

This is **LOCALIZED WEAR** over an equalized sheave. The danger here is that it's invisible during the rope's operation, and that's why you need to inspect this portion of an operating rope regularly. The rope should be pulled off the sheave during inspection and bent to check for broken wires.

This is a wire rope with a **HIGH STRAND** - a condition in which one or more strands are worn before adjoining strands. This is caused by improper socketing or seizing, kinks or dog-legs. It recurs every sixth strand in a 6-strand rope.

A **KINKED WIRE ROPE** is shown here. It's caused by pulling down a loop in a slack line during handling, installation or operation. Note the distortion of the strands and individual wires. This rope must be replaced.

Here's a **WIRE ROPE THAT HAS JUMPED SHEAVE**. The rope curled as it went over the edge of the sheave. When you study the wires, you'll see two types of breaks here: tensile "cup and cone" breaks and shear breaks that appear to have been cut on an angle.

DRUM CRUSHING is caused by small drums, high loads and multiple winding conditions.

LAY

DEFINITION

Regular Lay

Most common lay in which the wires wind in one direction and the strands the opposite direction. (Right lay shown)

Lang Lay

Wires in strand and strands of rope wind the same direction. (Right lay shown)

Right Lay

Strands wound to the left around the core. (Regular lay shown)

Left Lay

Strands wound to the left around the core. (Regular lay shown)

Alternate Lay

Alternate strands of right regular lay and right Lang lay.

GRADE 100 HEAT CONDITIONS

Effect of Elevated Temperature on the Working Load Limit Of Grade 100 Alloy Chain:

Chain should not be used outside of the -40°F to 400°F (-40°C to 204°C) temperature range without consulting the chain manufacturer. The specific working load limit reductions for Grade 100 chains used at and after exposure to elevated temperatures have been established and are show below.

MAXIMUM CHAIN TEMPERATURE	REDUCTION OF WORKING LOAD LIMIT WHILE AT TEMPERATURE	REDUCTION OF WORKING LOAD LIMIT AFTER EXPOSURE TO TEMPERATURE
Below 400°	None	None
400°	15%	None
500°	25%	5%
600°	30%	15%
700°	40%	20%
800°	50%	25%
900°	60%	30%
1,000°	70%	35%
Over 1,000°	*	*

*OSHA 1910.184 requires all slings exposed to temperatures over 1,000° F to be removed from service.

LINK WEAR TABLE

If chain is worn to less than the minimum allowable thickness (T shown below), remove the chain from service.

CHAIN SIZE	NEW CHAIN MATERIAL DIAMETER	MINIMUM ALLOWABLE THICKNESS
9/32"	0.279"	0.239"
3/8"	0.404"	0.342"
1/2"	0.529"	0.443"
5/8"	0.625"	0.546"
3/4"	0.821"	0.687"

T = DIAMETER/THICKNESS

GENERAL HOOK GUIDELINES

Important Safety Guidelines

- Always inspect hook & latch before using
- Never use a latch that is distorted or bent.
- Always make sure spring will force the latch against the tip of the hook. Do not tip load hooks. Always use the "bowl" of the hook to bear the load. The latch must never support the load.
- Latches are intended to retain loose sling or devices under slack conditions.
- Latches are not intended to be an antifouling device.

CRITERIA FOR REMOVAL FROM ASME B30.9

9-1.9.5 Removal Criteria

An alloy steel chain sling shall be removed from service if conditions such as the following are present:

- Missing or illegible sling identification
- Cracks or breaks
- Excessive wear, nicks, or gouges. Minimum thickness on chain links shall not be below the values listed in Link Wear Table above
- Stretched chain links or components
- Bent, twisted, or deformed chain links or components
- Evidence of heat damage
- Excessive pitting or corrosion
- Lack of ability of chain or components to hinge (articulate) freely
- Weld splatter
- For hooks, removal criteria as stated in ASME B30.10
- For rigging hardware, removal criteria as stated in ASME B30.26
- Other conditions, including visible damage, that cause doubt as to the continued use of the sling

CRITERIA FOR REMOVAL FROM ASME B30.9

9-5.9.5 Removal Criteria

A synthetic webbing sling shall be removed from service if any of the following conditions are present:

- A. Missing or illegible sling identification (see Section 9-5.7)
- B. Acid or caustic burns
- C. Melting or charring of any part of the sling
- D. Holes, tears, cuts, or snags
- E. Broken or worn stitching in load-bearing splices
- F. Excessive abrasive wear
- G. Knots in any part of the sling
- H. Discoloration and brittle or stiff areas on any part of the sling, which may mean chemical or ultraviolet/ sunlight damage
- I. Fittings that are pitted, corroded, cracked, bent, twisted, gouged, or broken
- J. For hooks, removal criteria as stated in ASME B30.10
- K. For rigging hardware, removal criteria as stated in ASME B30.26
- L. Other conditions, including visible damage, that cause doubt as to the continued use of the sling
